

How the IBEx Launchpad works

v1.0 – December 2022

Notice d'information simplifiée

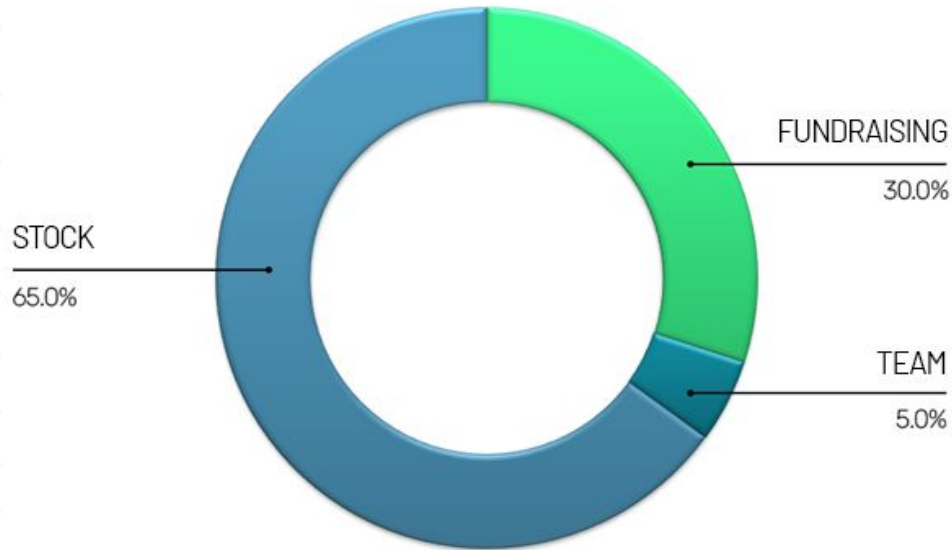

IBEx allows to safely acquire **real assets through digital tokens** issued by companies that pay investors in return for a significant portion of their revenue.

This Perpetual Repurchasing plan "PRP", clearly established at the time of your investment, is directly accessible from your IBEx account:

To invest, the steps are as follows:

1. **Choose** the companies that carry the projects you believe in,
2. **Acquire** parts of a project through digital tokens issued by the company,
3. **Decide** when and at what price you want your tokens or part of them bought back,
4. **Sell** your liquid tokens on the secondary market to other buyers at any time by setting your price,
5. **Use** your tokens to use the company's service when the project allows it.

The company issues a maximum of 100 million tokens.
It will not be able to issue any more after that.

- **FUNDING:** you can purchase tokens and place them in your liquid current account at any time or in your "LONG" savings account,
- **STOCK:** these are the tokens that the company keeps,
- **TEAM:** these are the tokens used to remunerate the team and its partners in order to associate them with its success.

Répartition des jetons

Type of token	Quantities	Status	Usage
Available for sale TOKEN	maximum 10,000,000 liquid tokens or 20,000,000 tokens placed in a savings account for 36 months and acquired at half the price.	for sale	Eligible for the PRP 36 months after purchase for savings account tokens and immediately for liquid tokens.
In reserve STOCK-TOKEN	65,000,000 ⁽¹⁾	saleable	The company's reserve. Not eligible for the PRP.
For the team TEAM-TOKEN	5,000,000	blocked	Locked for 36 months and then progressively acquired over a period of 36 months.
TOTAL	maximum 100,000,000⁽²⁾		

- ✓ **No conflict of interest** : IBEx and its founders do not receive tokens as payment either directly or indirectly,
- ✓ **Traceability** : all operations are traced and available in the IBEx explorer,
- ✓ **Security** : IBEx guarantees that your tokens will be delivered to you against your investment.

(1) As soon as the target amount is reached, the unsold tokens will be returned to the reserve which can only hold a maximum of 80M. The rest will be destroyed by an operation visible to all.

(2) The initial amount of tokens created is 100M, this maximum cannot be exceeded. On the other hand, it can be revised downwards in view of the destruction of unsold tokens during the fundraising and which would not find place in the capped reserve.

Tokens have no liquidity constraints:

- **eligible** for the PRP, which begins as soon as the company makes sales,
- **saleable** on the SPOT market at the end of the fundraising,
- **saleable** over-the-counter (OTC), at the price agreed between the two parties,
- **exportable** outside of IBEx,
- **can be used** to consume the service if the company allows it.

Tokens can be saved in a **LONG** account for investors:

- **who accept to temporarily renounce** to the "PRP" and to the sale on the "SPOT" market;
- **who believe in the long-term leverage of the deflation** of destroyed tokens through buybacks via the turnover.

Characteristics of the tokens placed in the **LONG** savings account:

- **sold at a lower price during the ICO,**
- **converted into liquid tokens** at the end of the 36-month period calculated from the date of receipt of payment.

TEAM tokens are for the team:

- not eligible for PRP or SPOT for 36 months,
- then released over 36 months after the end of the ICO in increments of 1/36th per month,
- is used as a supplement to the remuneration of the team, its consultants or the company's staff.

STOCK tokens are the company's reserve:

- are **not directly eligible for the VRP**,
- are blocked as long as the company does not make any sales or the fundraising is not completed,
- are then used, if necessary, to **accelerate the development** plan by becoming liquid.

The company's interest is not to drown the liquidity of the cash market (SPOT) by suddenly putting too many tokens for sale on the market and to communicate beforehand on the transfer operations. The IBEx explorer allows you to track the outputs of the reserve.

Also called "PRP"

The **PRP** or Perpetual Repurchasing Plan is our value-creating mechanism linked to the development of the company.

Part of the **turnover** is used to buy back tokens on the SPOT market, which guarantees fair treatment via the anonymous order book managed by IBEx.

According to the commitments of the information notice, the tokens repurchased during the PRP are destroyed, the remainder is put in reserve in **STOCK** tokens.

IBEx Explorer allows you to monitor all PRP operations.

A deflationary token

The tokens introduced through the IBEx Launchpad are deflationary, which differentiates them from legal tender currencies or equities listed on the stock exchange.

Since the mass in circulation cannot increase, the activity creates rarity which accelerates when the turnover increases.

If the price of the token rises, the impact on the company is neutral, since redemptions are indexed to a % of sales in EUR. This increase in price enhances the value of its reserve, which aligns the company's interests with those of its investors.

Fundraising is done in EUR (wire transfer, credit card) from the IBEx page dedicated to the token issuing company or in crypto directly via your IBEx account.

The conversion of your investment into tokens is always done on the date the funds are received.

In order to comply with European and French legislation, we ask you to submit to the "KYC" or "KYB" * procedure within your IBEx account: filling in a form and providing proof of identity. This data is confidential and is only processed for the purpose of this procedure. Usually on IBEx, your personal data are never transmitted without your prior agreement.

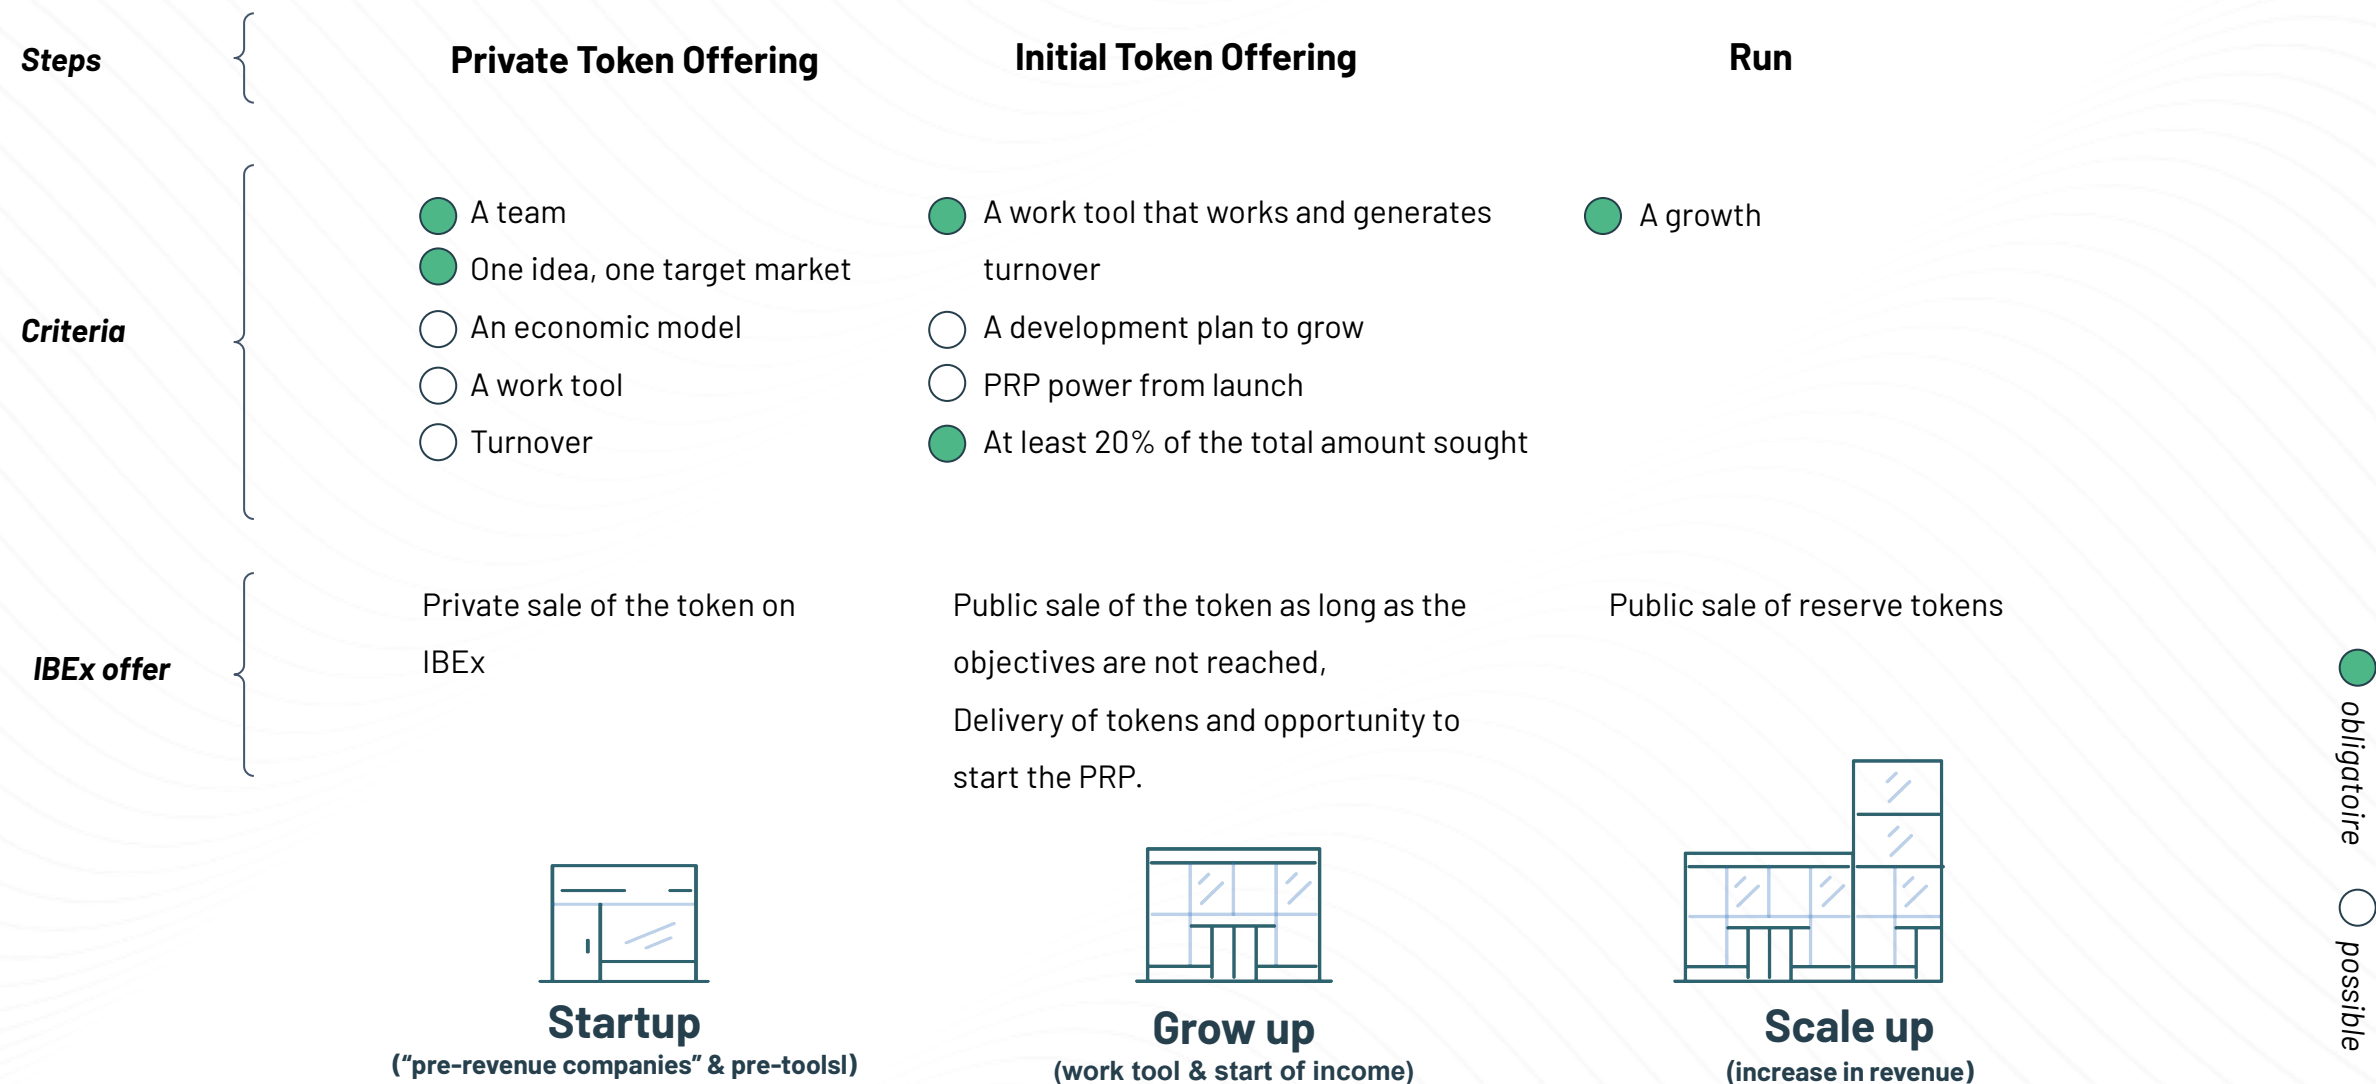

IBEx guarantees the delivery of your tokens against the payment made.

* KYC "Know Your Customer" (natural person), KYB "Know Your Business" (legal person)

Supervised in France by the Autorité de contrôle prudentiel et de résolution (ACPR), the objective of the KYC/KYB procedure is to prevent and avoid any risk of fraud, money laundering and financing of terrorist activities (LCB-FT). It consists in collecting and verifying information on the identity and integrity of their customers and partners, whether they are natural or legal persons.

At IBEx we believe that over time the value of the token is closely linked to the value creation of the "real world" company.
